

Analysis Results

In the event of madagascar tropical cyclone how many madagascar count map 2015 (v4) might be impacted?

Population in high hazard zones	0
Population in medium hazard zones	0
Population in low hazard zones	203
Total affected population	203
Unaffected population	234
Total population	437
Population needing evacuation ¹	203

Evacuated population minimum needs

Relief items to be provided single	Total
Toilets	11
Relief items to be provided weekly	Total
Rice [kg]	569
Drinking Water [l]	3,553
Clean Water [l]	13,601
Family Kits	41

Action checklist

- ✓ Are there enough water supply, sanitation, hygiene, food, shelter, medicines and relief items available for 210 people?
- ✓ How will warnings be disseminated?
- ✓ What are people's likely movements?
- ✓ Which group or population is most affected?
- ✓ Who are the vulnerable people in the population and why?
- ✓ What are people's likely movements?
- ✓ What are the security factors for the affected people?
- ✓ What are the security factors for relief responders?
- ✓ How will we reach displaced people?
- ✓ What kind of food does the population normally consume?
- ✓ What are the critical non-food items required by the affected population?
- ✓ If yes, where are they located and how will we distribute them?
- ✓ If no, where can we obtain additional relief items and how will we distribute them?
- ✓ What are the related health risks?
- ✓ Who are the key people responsible for coordination?

Notes and assumptions

- Total population in the analysis area: 440
- ¹People need evacuation if they are in a hazard zone.
- Map shows the numbers of people in high, medium, and low hazard zones.
- Numbers reported for population counts have been rounded to the nearest 10 people if the total is less than 1,000; nearest 100 people if more than 1,000 and less than 100,000; and nearest 1000 if more than 100,000.
- Rounding is applied to all population values, which may cause discrepancies when adding values.

- The extent and severity of the mapped scenario or hazard zones may not be consistent with future events.
- The impacts on roads, people, buildings and other exposure elements may differ from the analysis results due to local conditions such as terrain and infrastructure type.
