

Analysis Results

In the event of madagascar earthquake (m 4.5) how many madagascar count map 2015 (v4) might die or be displaced?

Number of fatalities	0
Number of people displaced	1,092
Total affected population	1,092
Unaffected population	10,661,143
Total population	10,662,236
Population needing evacuation ¹	1,092

Evacuated population minimum needs

Relief items to be provided single	Total
Toilets	55
Relief items to be provided weekly	Total
Rice [kg]	3,058
Drinking Water [l]	19,110
Clean Water [l]	73,164
Family Kits	219

Action checklist

- ✓ Are there enough water supply, sanitation, hygiene, food, shelter, medicines and relief items available for 1,100 people?
- ✓ How will warnings be disseminated?
- ✓ What are people's likely movements?
- ✓ Which group or population is most affected?
- ✓ Who are the vulnerable people in the population and why?
- ✓ What are people's likely movements?
- ✓ What are the security factors for the affected people?
- ✓ What are the security factors for relief responders?
- ✓ How will we reach displaced people?
- ✓ What kind of food does the population normally consume?
- ✓ What are the critical non-food items required by the affected population?
- ✓ If yes, where are they located and how will we distribute them?
- ✓ If no, where can we obtain additional relief items and how will we distribute them?
- ✓ What are the related health risks?
- ✓ Who are the key people responsible for coordination?
- ✓ Are there enough covered floor areas available for 1,100 people?
- ✓ Are there enough shelters and relief items available for 1,100 people?
- ✓ If yes, where are they located and how will we distribute them?
- ✓ If no, where can we obtain additional relief items from and how will we transport them?
- ✓ Are there enough water supply, sanitation, hygiene, food, shelter, medicines and relief items available for 1,100 displaced people?

Notes and assumptions

- Total population in the analysis area: 10,663,000

- ¹People are displaced if they experience and survive a shake level of more than 5 on the MMI scale.
- The fatality calculation assumes that no fatalities occur for shake levels below 4 and fatality counts of less than 50 are disregarded.
- Fatality model is from Institut Teknologi Bandung 2012.
- Map shows the estimation of displaced population.
- Numbers reported for population counts have been rounded to the nearest 10 people if the total is less than 1,000; nearest 100 people if more than 1,000 and less than 100,000; and nearest 1000 if more than 100,000.
- Rounding is applied to all population values, which may cause discrepancies when adding values.
- The extent and severity of the mapped scenario or hazard zones may not be consistent with future events.
- The impacts on roads, people, buildings and other exposure elements may differ from the analysis results due to local conditions such as terrain and infrastructure type.
